

prior state

```
graph LR; A[prior state] --> B[prediction]; B --> C[new observation]; C --> D[filtered state];
```

The diagram illustrates a four-step process flow. It begins with a 'prior state' box, which is light blue with a dashed border. A blue arrow points from this box to a 'prediction' box, which is light blue with a solid blue border. From the 'prediction' box, a green arrow points to a 'new observation' box, which is light green with a solid green border. Finally, a green arrow points from the 'new observation' box to a 'filtered state' box, which is light green with a solid green border. The boxes are arranged horizontally from left to right.

prediction

new observation
